

The World's Most Advanced Lightning Detection System

ULTRA-PRECISE LIGHTNING DETECTION & EARLY WARNING SYSTEMS FOR GOLF COURSES

Reliability

Accuracy

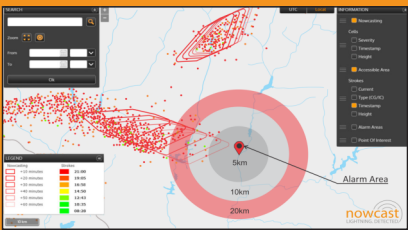

Efficiency

Accuracy & Efficiency

Blitz-Detect powered by **nowcast** sets the industry benchmark in lightning detection accuracy. Our networked array of antennas allows for precise positioning of lightning strokes in real time.

Early Warnings

Nowcast's rTNT algorithm calculates lightning cells in real time. With our patented cell tracking, we can accurately predict where lightning cells will move over the next 60 to 80 minutes. Our tracking and prediction algorithms provide safe and efficient operation of golf courses.

Lightning Safety

One to two hours before a storm cell arrives at a defined alarm region, the exact time of arrival, duration and passing of the thunderstorm is calculated. The Blitz-Detect team of lightning experts then provide lightning safety plans specifically for each golf club to ensure safe operation of these outdoor activities.

When it comes to lightning detection, accuracy & efficiency is critical. Choose the world's most accurate lightning detection system.
